SMART HOSPITAL
Emergency Resource Management System

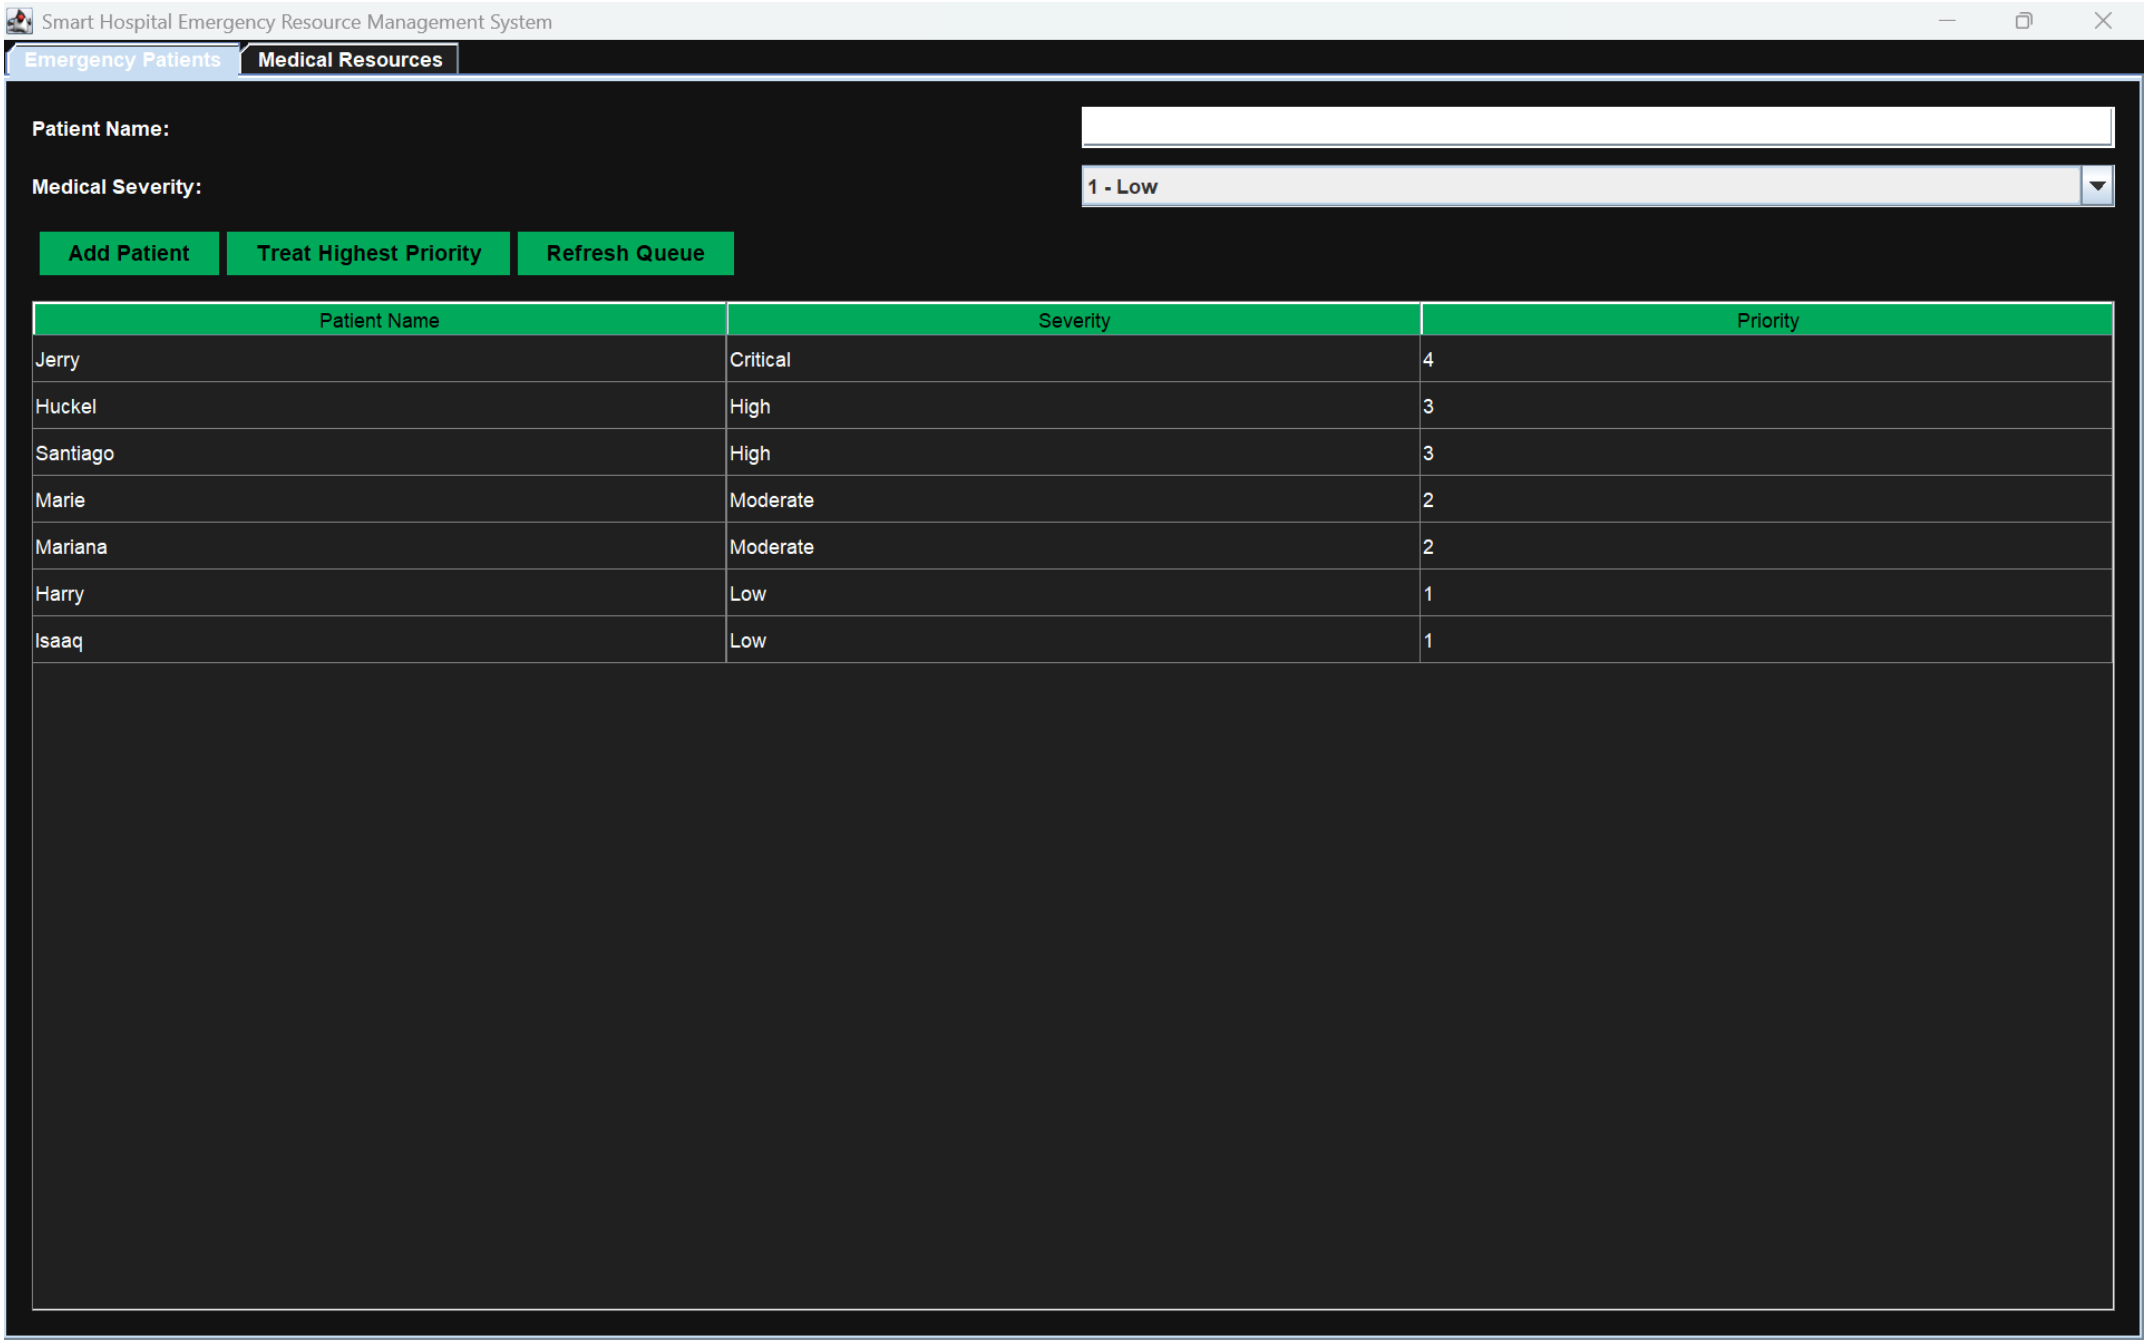

PROJECT OUTPUT SCREENSHOTS

Prepared by: Maria Sony | **Roll No:** 01

Patient prioritization • Resource lookup • Inventory restocking

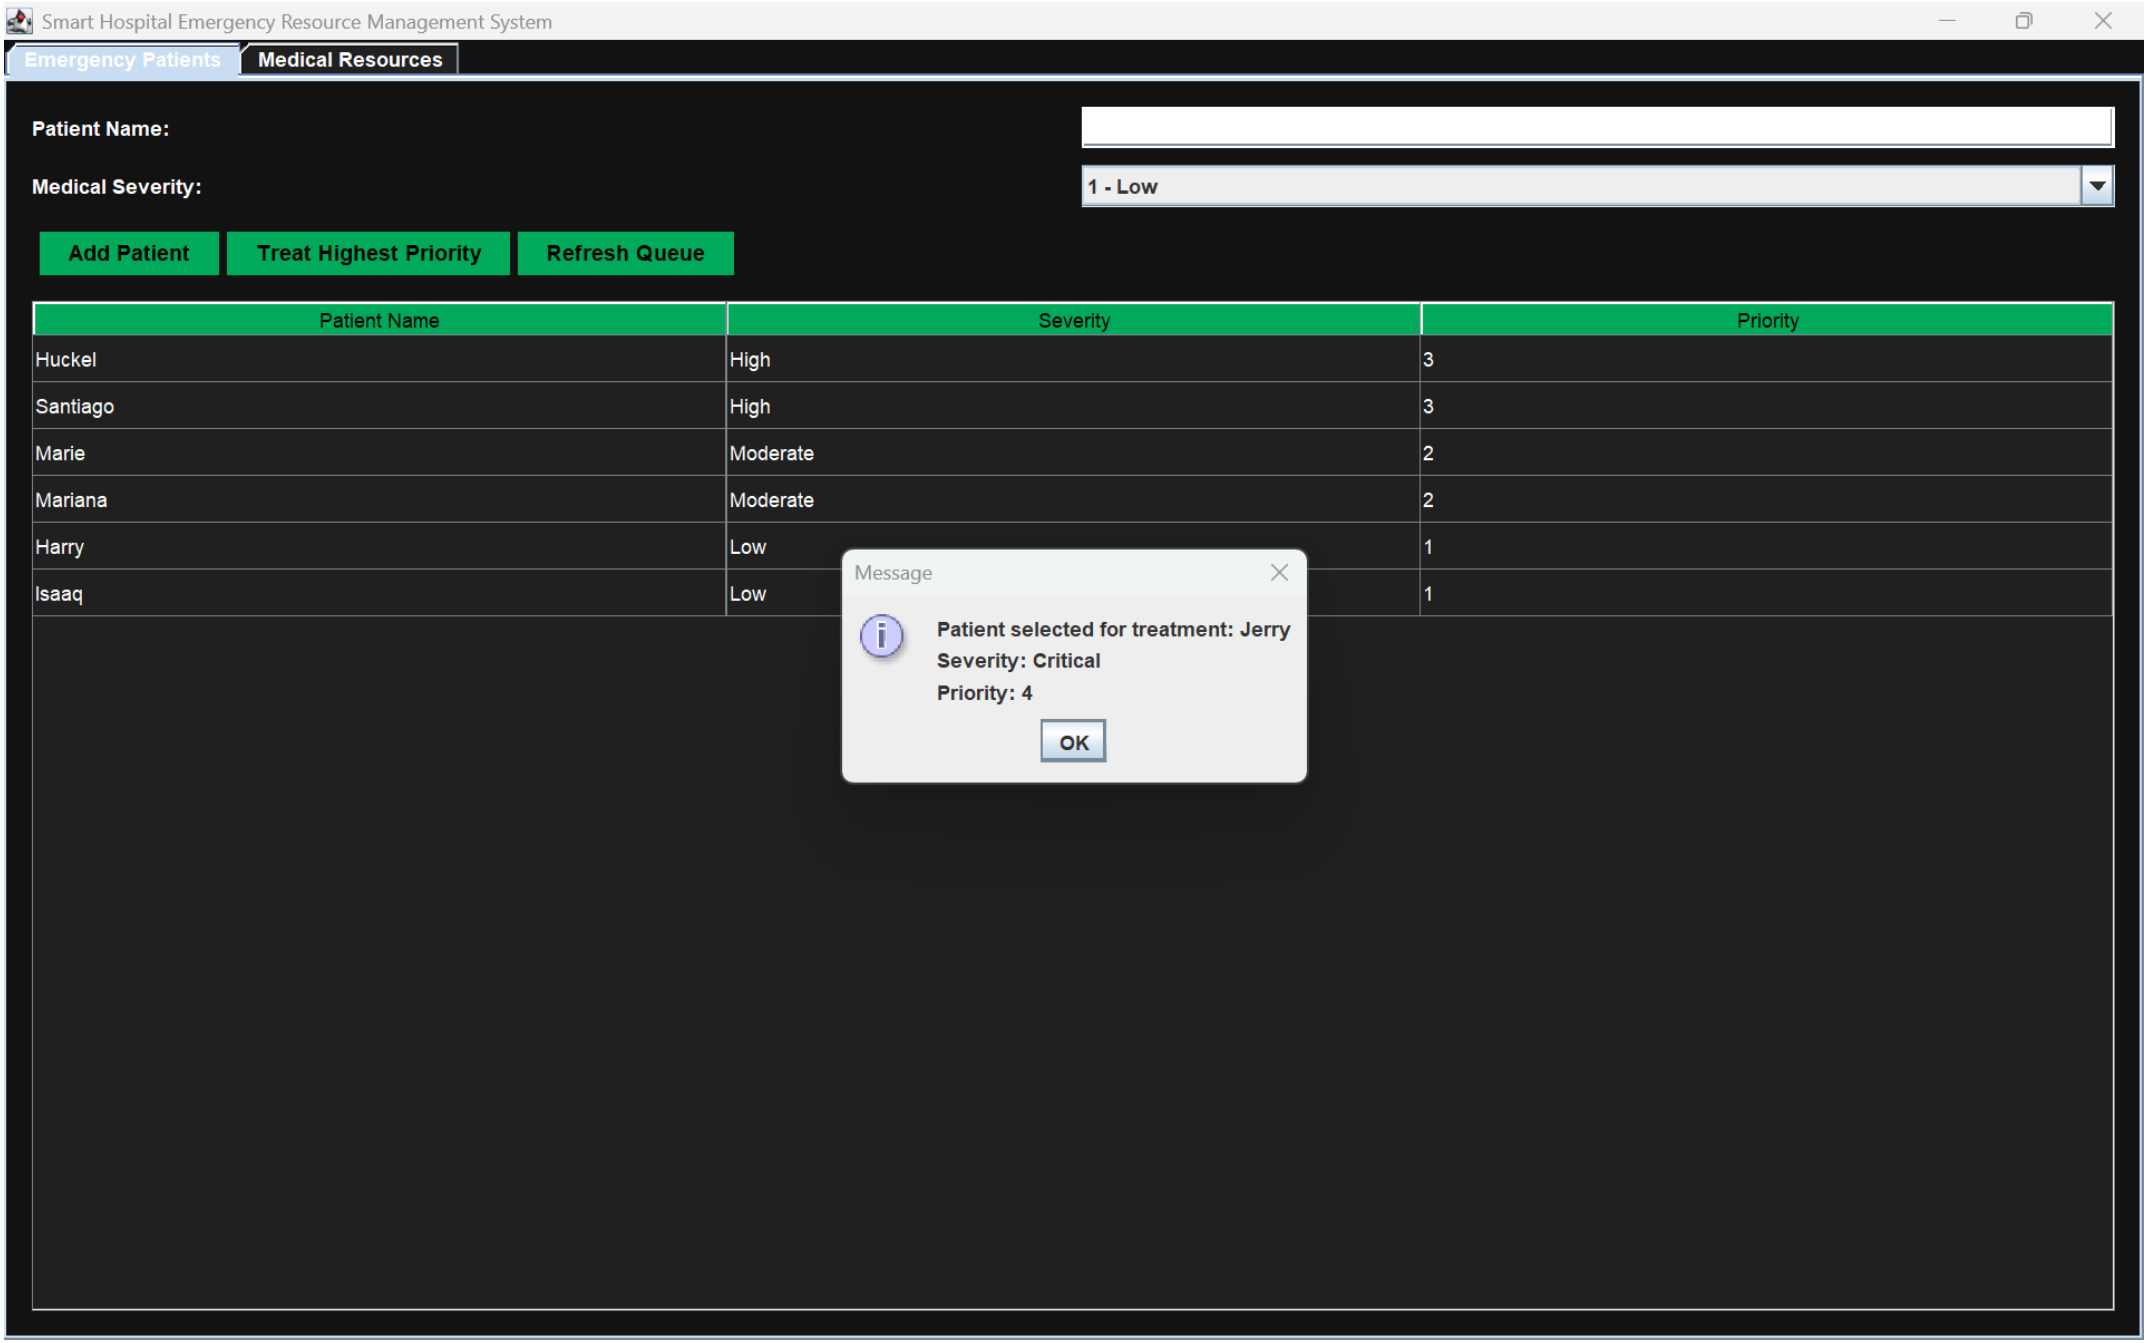

1. Emergency Patients — Patient Queue

Displays patients ordered by medical priority, including severity and priority values.

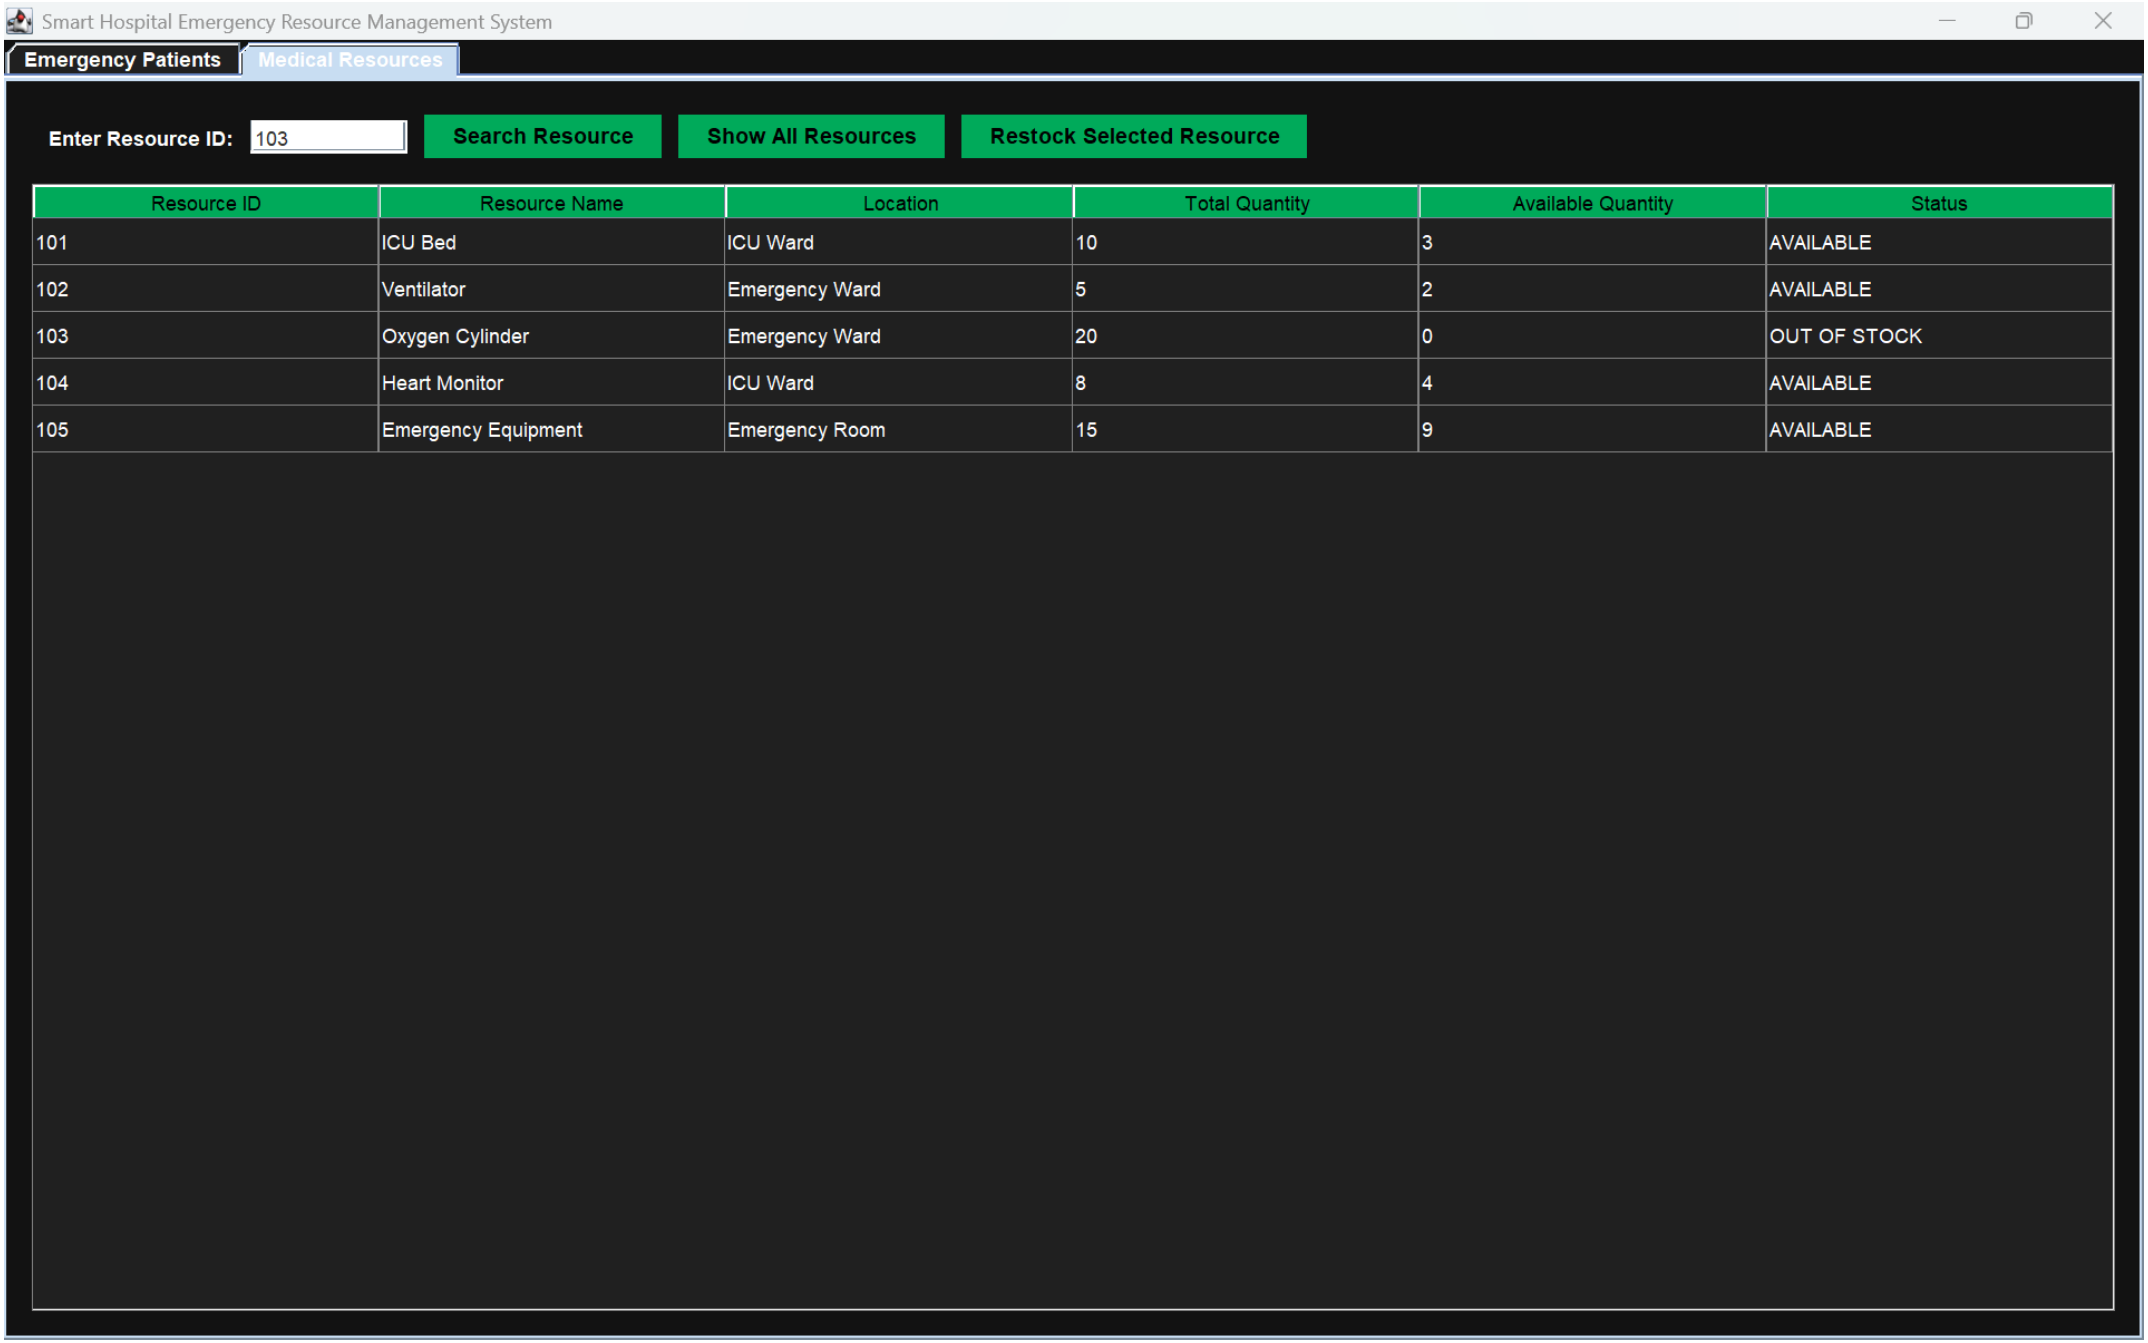

2. Emergency Patients — Highest-Priority Treatment

Treat Highest Priority selects Jerry, the critical patient with priority 4, and removes him from the queue.

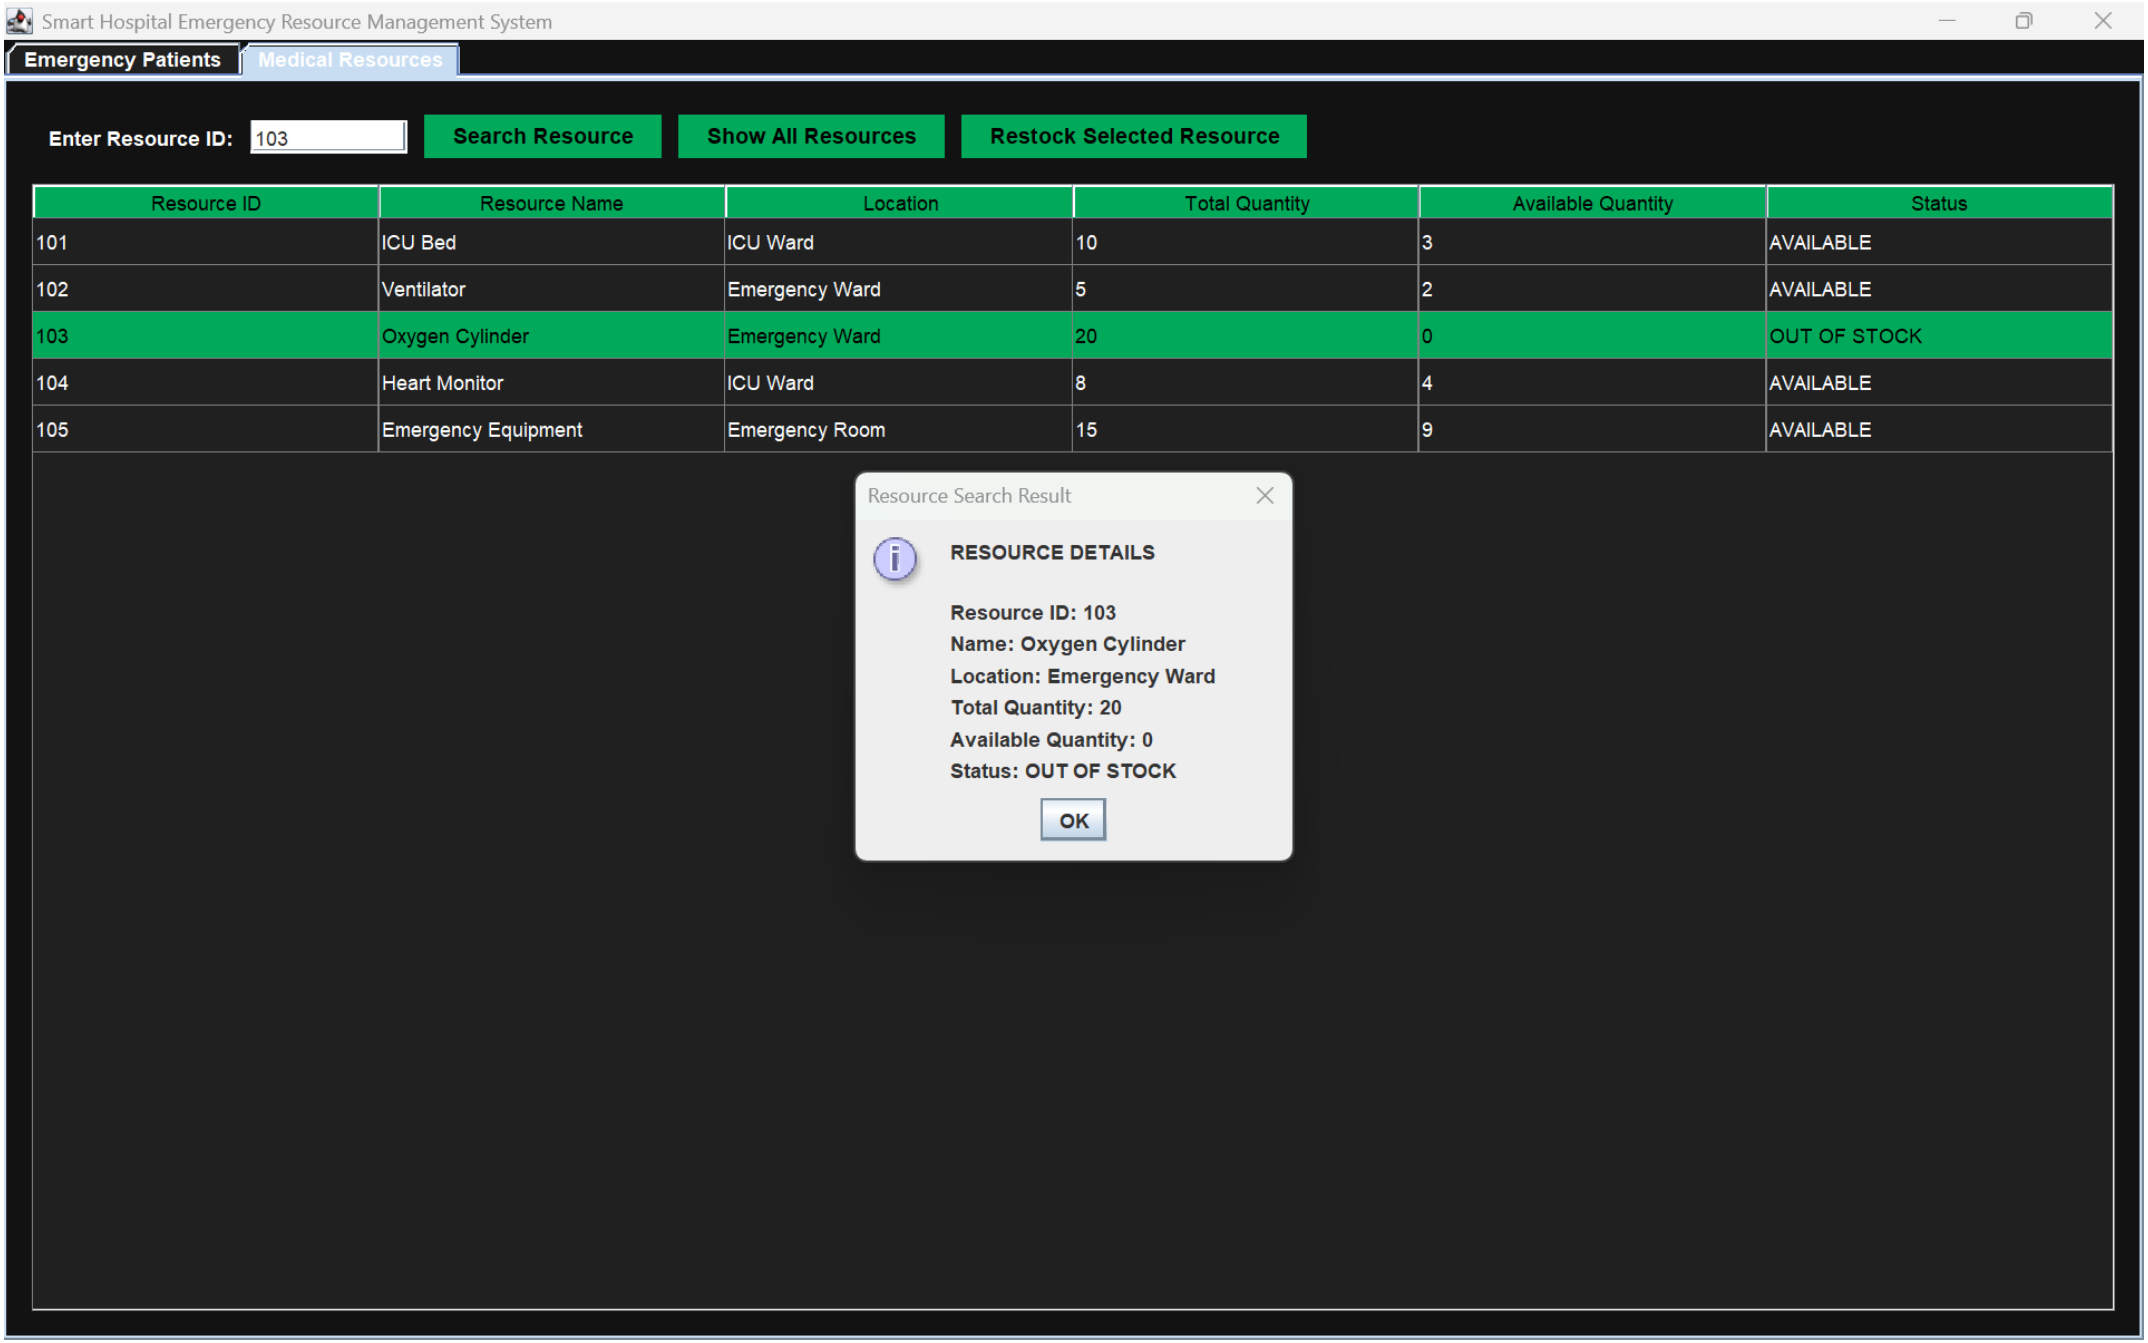

3. Medical Resources — Resource Inventory

Shows resource IDs, names, locations, total and available quantities, and stock status.

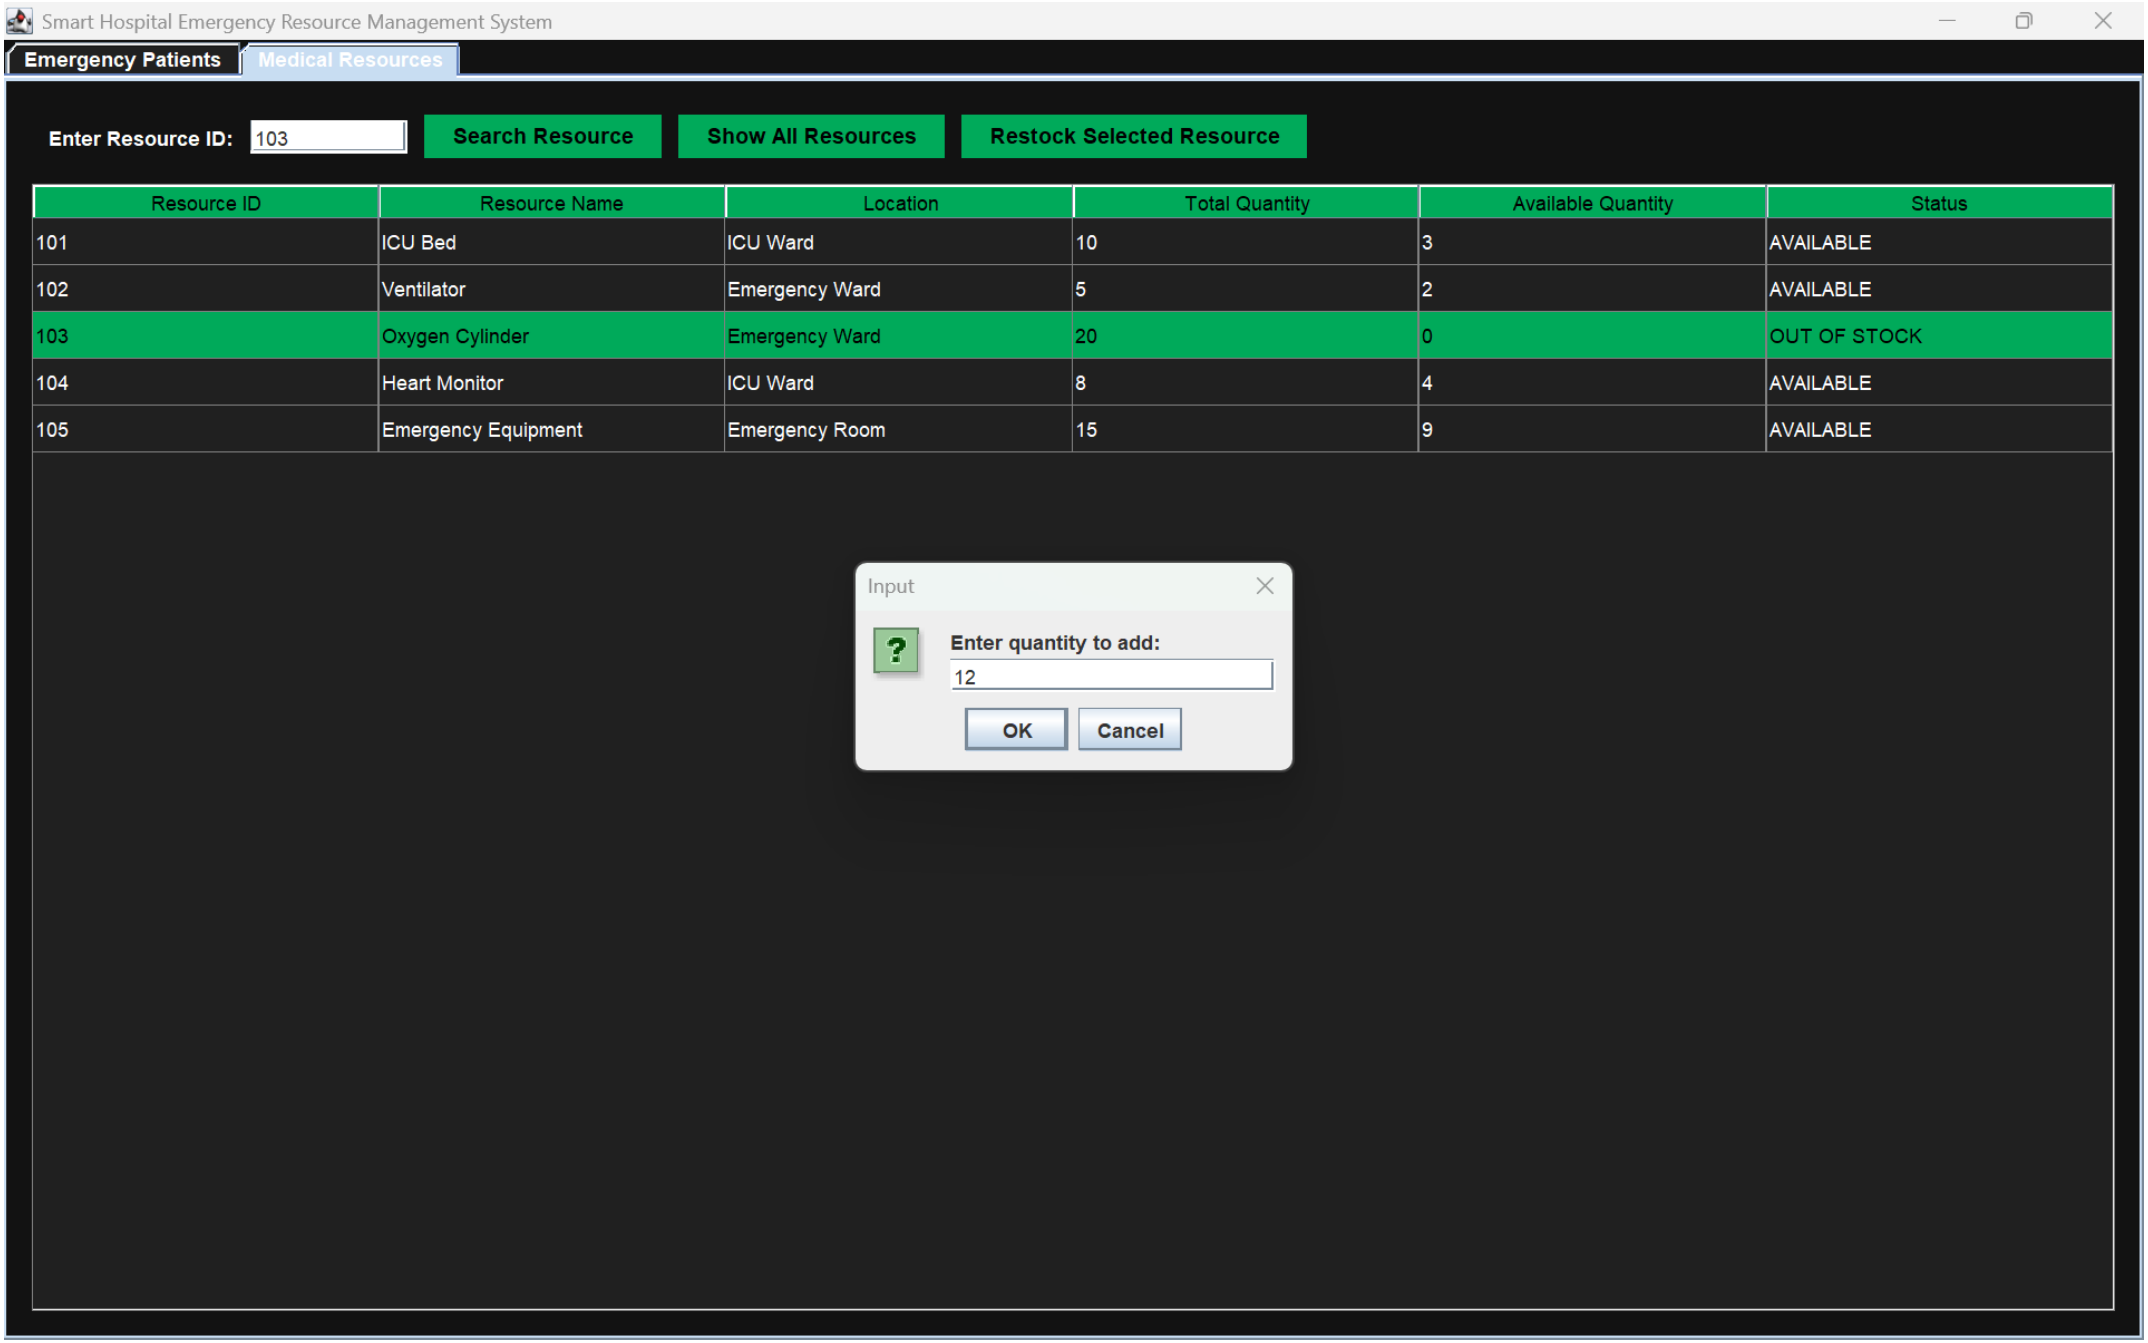

4. Medical Resources — Search Resource

Searching for resource ID 103 shows oxygen cylinder details and its out-of-stock status.

5. Medical Resources — Restock Quantity Input

The restocking workflow requests the quantity to add to the selected resource.

6. Medical Resources — Successful Restocking

Adding 12 units updates the oxygen cylinder's available quantity to 12 and status to AVAILABLE.
